DETAILED ACTION

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. LANCE discloses an apparatus for automatically providing electrical voltage output in three different magnitudes responsive to three ranges of source voltage values comprising a transformer including first and second primary windings and a secondary winding; a voltage sensor interconnected with the source voltage and energized to compensate for line voltage variations. LANCE does not disclose an in range control actuated by each of the first, second, third and fourth signals to energize a first relay having contacts that interconnect the source voltage with the transformer and the in-range control actuated by the fifth signal to de-energize the first relay disconnecting the source voltage from the transformer nor does the prior art teach the voltage sensor fourth signal acting on the boost control to drop out the second relay which drops out the third relay and provides a direct connection between the source voltage and the apparatus output.

Allowable Subject Matter

Claims 1-5 allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record does not disclose or suggest the signals arranged in the claimed order for controlling the electrical voltage output nor the means to directly connect the connection between the source voltage and the apparatus output dependent on the fourth signal.

Art Unit: 2836

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
